Hiring Team

Dear Hiring Team,

I am writing to apply for the IT Developer (Palantir) position at Shoals Technologies Group. As a Full-Stack Software Engineer with hands-on experience building enterprise data platforms, automating business processes, and integrating complex systems for Ethiopia's Ministries of Agriculture and Health, I am excited by the opportunity to bring that same rigor to Shoals' mission of powering the renewable energy transition.

In my current role at Development Gateway, seconded to the Ministry of Agriculture, I design and maintain a suite of production systems used by thousands of government staff and field specialists nationwide. This work has given me deep, practical experience in exactly the areas this role calls for: building scalable data pipelines and Ontology-style models that unify data across departments, integrating enterprise systems (DHIS2, SharePoint, Odoo ERP) with custom applications, developing automated KPI dashboards and performance-reporting workflows that feed directly into executive and parliamentary reporting, and enforcing data governance and quality standards across every system I ship. I have tested and documented over 50 REST API endpoints, containerized and deployed multiple production systems with Docker, and set up Open Telemetry monitoring to keep systems reliable at national scale.

While my direct experience is with Django, React, Laravel, and DHIS2 rather than the Palantir Foundry/AIP stack specifically, the underlying skill set transfers directly: translating business requirements from non-technical stakeholders into scalable applications, building low-code and custom workflows on top of enterprise data, and delivering the kind of operational dashboards and automated reporting that drive real decisions. I am a fast learner who has repeatedly ramped up on new platforms and domains, from DHIS2 health data systems to ERP budget management, and I am eager to apply that same adaptability to mastering the Palantir ecosystem.

I am particularly drawn to Shoals' mission of advancing solar and energy storage solutions worldwide, and to the chance to apply my background in public-sector digital transformation to an industrial, manufacturing-driven environment. I would welcome the opportunity to discuss how my experience in enterprise integrations, data engineering, and stakeholder-facing application development can support your team's goals.

Thank you for your time and consideration. I look forward to the possibility of speaking with you further.

Sincerely,

Lydia Fikire
